A Greek Inscription from Lesbos Honoring a Julio-Claudian

© Dr. Rudolf Habelt GmbH, Bonn
A GREEK INSCRIPTION FROM LESBOS HONORING A JULIO-CLAUDIAN

During the course of the excavations of 1987 in Mytilene conducted by the University of British Columbia under the aegis of the Canadian Archeological Institute at Athens an inscribed block was discovered. It did not emerge from the excavations themselves; rather it was found in the garden of the property at 6 Kardoni Street that the Institute had rented to serve as a base of operations. The house lies just west of the church of Agios Therapon, and according to the present owner the block had been brought there by his father from a workshop in the direction of Agiassos.

The block is of grey marble and has been reused as a well-head. A hole varying from 0.34 to 0.40 m. in circumference has been made through the inscribed surface which served as the top of the well. The sides beneath the inscribed surface have been trimmed in order to fashion the block into a roughly cylindrical well-shaft. The surface was first dressed with a toothed instrument, while the other sides, except for the (original) top, were more smoothly dressed. The top is quite roughly finished, and has a pair of cuttings (approximately 0.075 to 0.080 m. square) situated in diagonally opposite corners.

The height is 0.70 m., the width 0.78 m. and the thickness 0.58 m. The height of the letters is 0.03 m., and the text is non-stoichedon

[Δρ]ουκον Κλαοδδ[ι]ον τον πατ[ε]]
ρη τω Σεβαςτω διος Μεγιστω κω
τηροκ Τιβεριω Κλαοδιω καιαωρος
ννν Τεβατω Γερμανικω να vacat

Epigraphical Commentary

The inscribed surface is somewhat weathered, but all the surviving letters and traces can be made out distinctly on a good squeeze. Serifs adorn the letters, and the fact that omikron is considerably larger in circumference than the slightly ovoid omega makes it easy to distinguish between the two in the case of fragmentary letters.

---

1 My thanks are due to the director of the excavations, Professor E.H. Williams, for permission to study the stone, and to my colleague Professor E. Csapo, with whom I initially examined the stone. To the former and Professor N.M. Kennell I am grateful for helpful comments on an earlier draft of this paper.

2 At least one other anciently worked stone, a small block decorated with sculpture in relief, was also found in the garden of this property for which see the report on the excavations of 1987 by E.H. Williams forthcoming in Classical Views/Echos du Monde Classique. Over the course of the following winter (1987-88) construction was begun on the property and subsequently halted when antiquities were found. Thus it is worth mentioning that IG XII, 2 209 (as restored, honoring the emperor Gaius), 86 and 442 were found in or near the church of Agios Therapon.

3 The cuttings are roughly as deep as they are square, but have no traces of metal or perforations that might indicate their precise function, or even the time at which they were made. The size of the stone, in itself, does not rule out the possibility that it was a statue base (cf. e.g., IG XII, 2 Suppl. 62)
Line 1: two or possibly three (if one was iota) letters have been lost at the beginning of the line. The lower right portion of the arc of omikron is preserved. The bottom of the centered vertical of upsilon survives. The bottom horizontal and part of the diagonal stroke of the sigma are visible. The bottom right third of the arc of the second omikron survives. A very small portion of the arc of the third omikron is faintly visible. The centered vertical of tau survives. It is quite unlikely that more than a single letter has been lost at the end of the line.

Line 2: the top two-thirds of each leg of delta survive, and the angle formed by them is noticeably greater than that of any preserved alpha or lambda. The top half of the iota is preserved in the narrow space between the letters on either side of it.

Line 3: the top two-thirds of the iota are visible. The top of the vertical and the top part of the upper arc of beta survive. To judge from comparison with lines 1 and 2 some eight to ten letters in the middle of the line were lost when the block was converted into a well-head. Nearly two-thirds of the arc of omega survive.

Line 4: a space equivalent to that occupied by three letters in each of lines 2 and 3 has been left uninscribed at the beginning of the line. A part of the vertical and the top of the upper arc of beta survive; after it between eleven and thirteen letters have been lost. The top of the arc of omega is preserved. The remainder of the line is uninscribed.

The second declension genitives in Ï·Î¿ make it obvious that the inscription is in Aeolic dialect. The use of Aeolic in inscriptions from Lesbos waned in the third and second centuries before Christ, but was revived in the first.4 From the time of Pompey's sojourn in the East until the end of the second century after Christ it was preferred over koine by a wide margin on honorific inscriptions.5

It is clear that a relative (surely the father) of a Julio-Claudian emperor was the honorand of this inscription. The remains at the beginning of line 1 are consistent with a single name from the Julio-Claudian house: Δρούςος. Thus the honorand is Nero Claudius Drusus, brother of the emperor Tiberius and father of Claudius.6

---

4 See C.D. Buck, The Greek Dialects (Chicago, 1955) 208, 280 for the survival and revival of Aeolic. The barytonesis and psilosis of Lesbian Aeolic were a subject of much discussion among the scholars of Alexandria, and it is generally the custom to employ them in editions of inscriptions written in Lesbian dialect (S.Charitonides, Έπιγραφτες τῆς Λέσβου [Athens, 1968] is a notable exception), regardless of their date. It should be pointed out, however, that there is a discrepency between the practice of epigraphers and that of editors of literary texts in the matter of accentuation. The latter (e.g., E.Lobel and D.Page, Poetarum Lesbiorum Fragmenta [Oxford, 1955]) treat all oblique cases of the definite article as (proclitic) oxytones. See E.-M. Hamm, Grammatik zu Sappho und Alkaios (Berlin, 1957) 44 and F.Bechtel, Die Griechischen Dialekte (Berlin, 1921) Vol. I, 7-8. Perispomenon articles were accentted with the grave (i.e., τὰ, τῶν τῶν etc.) by Aristarkhos (in Apollonios Dyskolos, de Syntaxi 51.26), and papyrus discoveries tend to confirm this principle of accentuation. Cf. J.T.Hooker, The Language and Text of the Lesbian Poets (Innsbruck, 1977) 18-23 and the review of this book by A.M.Bowie in LCM 3 (1978) 23-29.

5 "Honorific" inscriptions here include: IG XII, 2 140-267, 654-6; IG XII Supplement 39-63; Charitonides (n.4 above) 38-66; SEG 27.484 and 29.741. Except for the period of (Trajan and?) Hadrian, when they were equally popular, Aeolic was far more popular than koine.

6 The order of Drusus' names here is unusual, but not unique. It is found also on an inscription (dated between 14 and 19) from Ilion honoring Antonia, Drusus' wife: see Peter Frisch, Die Inschriften von Ilion
The regular nomenclature of the emperor Claudius is easily accommodated in the lacunae in lines 3 and 4 created by the alteration of the block into a well-head, although the identification of him with Zeus Megistos is unique, so far as I have been able to determine. The inscription, then, is to be dated during the reign of Claudius. It is remarkable that the earliest possible date for the inscription is a full fifty years after Drusus' death in 9 B.C. (Dio Cassius 55.1; Veil. Pater. 2.97.1). Such recognition of long deceased ancestors and family members was characteristic of Gaius as well. At Mytilene there was a dedication (IG XII, 2 172) from the reign of Gaius honoring Marcus Agrippa, Agrippa Posthumus, and the brothers and sisters of the emperor, and at Thera the father of Gaius was honored during his reign (IG XII, 3 472 and Suppl. 1393). The most likely time for such recognition of Drusus is shortly after Claudius' accession. At that time he, like his predecessor and successor, arranged for a number of honors to be decreed for various members of his family, including games to be held in the Circus on the anniversary of Drusus' birthday. It is worth noting that, although Drusus was caned a god on an earlier Lesbian inscription honoring his wife, Antonia, he was not so called on the present dedication.
That there were close ties between a number of prominent Mytilenaian and the imperial family extending over several generations is well documented. The inscription honoring Drusus Claudius is yet another example of how Lesbos, and Mytilene in particular, surpassed the other Greeks in expressing its gratitude to its friends in Rome.
