

**Vitalité de la nasalité vocalique en èwè de l'Est (EE) et processus de dénasalisation
vocalique en èwè de l'Ouest (EO)**

Kossi Antoine Afeli

Following my comparative study of affricates and sibilant fricatives in the so-called eastern Ewe and western Ewe (Afeli 1995), I am here concerned with another significant difference in these two types of Ewe: the vitality of vocalic nasality in eastern Ewe and the process of vowel denasalisation in western Ewe. Basing myself on the study of data collected in both types of Ewe, I have come to the conclusion that this hypothesis is verified.
